

Parts of an Illuminated Sign Cabinet Guide

SIGN CABINETS, also known as sign boxes or light boxes, are enclosed structures used to display and illuminate signage for businesses, offices, and public spaces. Typically made from durable materials like aluminum or steel with acrylic, polycarbonate, or flex faces; these cabinets protect the signage from weather and wear. Inside, they house LED or fluorescent lights that evenly illuminate the sign face, ensuring visibility both day and night. Sign cabinets can be custom-shaped, and their versatility allows for vibrant, eye-catching designs that enhance brand visibility and draw attention from a distance.
